

Does the complete model generalize in depth?

Same 1,350 graphs at each N · 345,600 paired queries · counts 1–256

Correct answer + exact stopping loop All steps 1...N correct (strict prefix) Exact stopping loop

Blue: final letter AND stop at N; earlier errors may recover. Green: zero errors at ANY step 1...N.

Dotted lines: R training unroll 12 · largest trained count 63 · three-digit boundary 100.

Shading: pointwise 95% graph-level Wilson intervals; repeated horizons are paired, not independent.
