

# Does the complete model generalize in depth?

1,350 independent graphs · 345,600 paired queries · every count 1-256

Correct answer + exact stopping loop    Every intermediate step correct    Exact stopping loop

Dotted lines: R training unroll 12 · largest trained count 63 · three-digit boundary 100.  
Shading: pointwise 95% graph-level Wilson intervals; repeated horizons are paired, not independent.
