

Where does execution first go wrong?

1,350 independent graphs · 345,600 paired queries · every count 1-256

Graphs with an entirely correct prefix

Each failing graph contributes once to the histogram; survivors are censored at the maximum tested depth.
Shading: pointwise 95% graph-level Wilson intervals; repeated horizons are paired, not independent.

First error in each failing graph
42 fail; 1,308 / 1,350 survive through 256
